# dine in style with peace of mind

## THE BRAND

Established in 2003 by a Singapore company, móderne is a wholly owned premium brand for bone china tableware catered to both home and business markets. From humble beginnings, with a simple collection of our hallmark white dinnerware to being the internationally recognised producer of quality and style we are today, we owe this phenomenal success to the dedication we pay towards quality, productivity and customer service.

Constantly on the lookout for new ideas to expand the collection, our designers set out every day in pursuit of inspiration, seeking to generate revolutionary designs oozing with simplistic elegance that is a core hallmark of the brand. Reiterating our passion and commitment, we assure our customers of our constant endeavour to dynamically diversify our collection in order to cater to the ever changing demands of the hospitality professionals and home users alike. With this objective in mind, our patrons can always look forward to a unique blend of innovation and excellence whenever they buy móderne.

## SUPERBONE

móderne's Superbone line is a collection of fine fired tableware using the best materials to achieve whiteness and transparency far superior than that of ordinary porcelain. Using lead-free glaze approved by FDA, móderne's unique one-time firing technology not only ensures safe use of our products, but also allows for the creation of new and trendy designs catered to the needs of modern lifestyles.

## STRENGTHENED BONE CHINA

Our Strengthened Bone China, developed and patented in 1995, is a worldwide success, receiving accolades from customers all over the world for its durability. Extremely fracture resistant, this line of tableware has high thermal shock resistance and is conventionally microwave oven-safe and dishwasher proof.

## A LEAD FREE PRODUCT!

Did you know conventional stoneware and porcelain crockery contains lead that contaminates your food and can cause potentially fatal health problems? Not only does it impede children's brain development but also limits the blood's capability to transport oxygen across the body. Lead eventually finds its way to the bone where it hinders production of blood cells and calcium absorption (that is imperative for strong and healthy bones).
